

# The Value of Social: Comparing Open Student Modeling and Open Social Student Modeling

Peter Brusilovsky, Sibel Somyurek Julio Guerra, Roya Hosseini, Vladimir Zadorozhny, University of Pittsburgh

### **Overview**

- The past
  - Why we are doing it?
- The paper
  - Open Social Sudent Modeling and its evaluation
- Beyond the paper
  - What we have done since submitting the paper?
- The future
  - What are our plans and invitation to collaborate

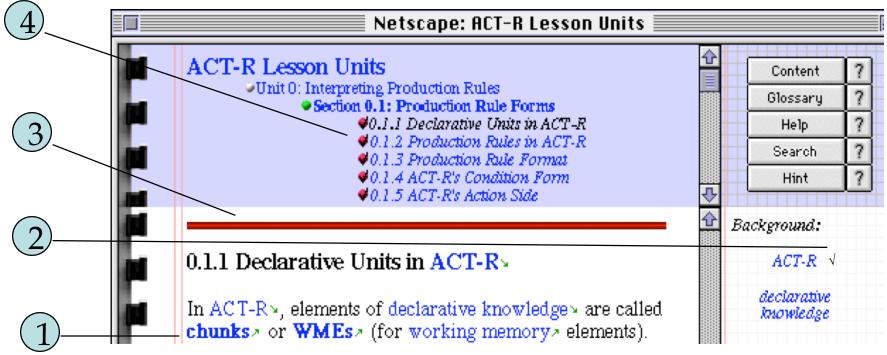

# The Past

- Why?
  - –Increase user performance
  - –Increase motivation and retention
- How?
  - -Adaptive Navigation Support
  - -Topic-based Adaptation
  - -Open Social Student Modeling

# **Adaptive Link Annotation: InterBook**

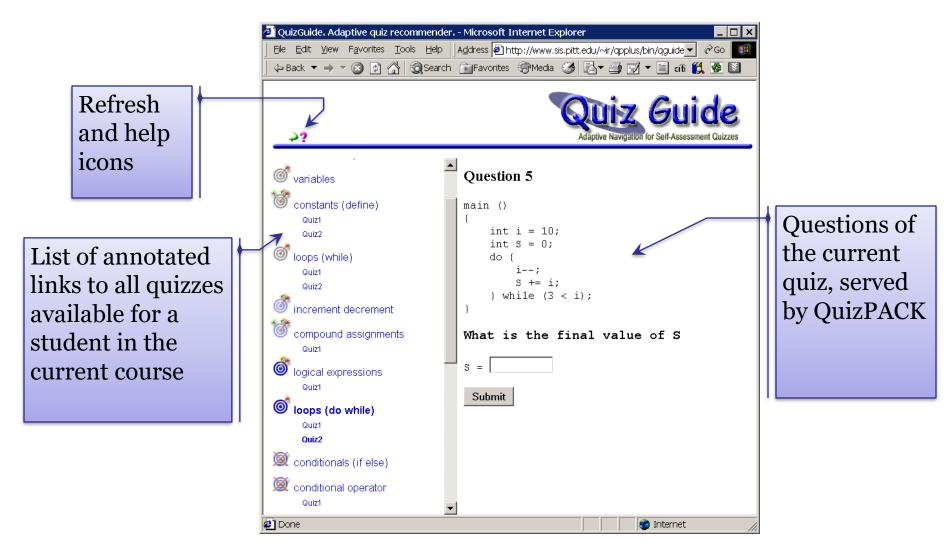

- 1. Concept role
- 2. Current concept state

# Current section state Linked sections state

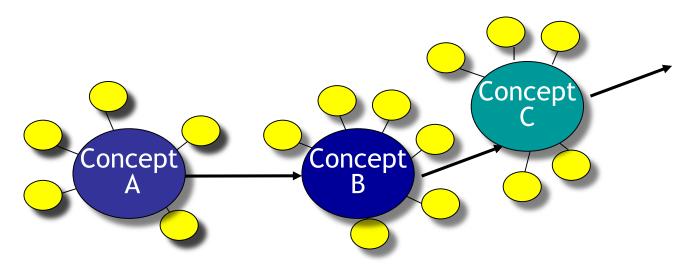

# **QuizGuide = Topic-Based ANS**

# **Topic-Based Adaptation**

- Each topic is associated with a number of educational activities to learn about this topic
- Each activity classified under 1 topic

# **QuizGuide: Adaptive Annotations**

- Target-arrow abstraction:
  - Number of arrows level of knowledge for the specific topic (from 0 to 3). *Individual, event-based adaptation.*

 Color Intensity – learning goal (current, prerequisite for current, not-relevant, not-ready). *Group, timebased adaptation*.

 $\odot$ 

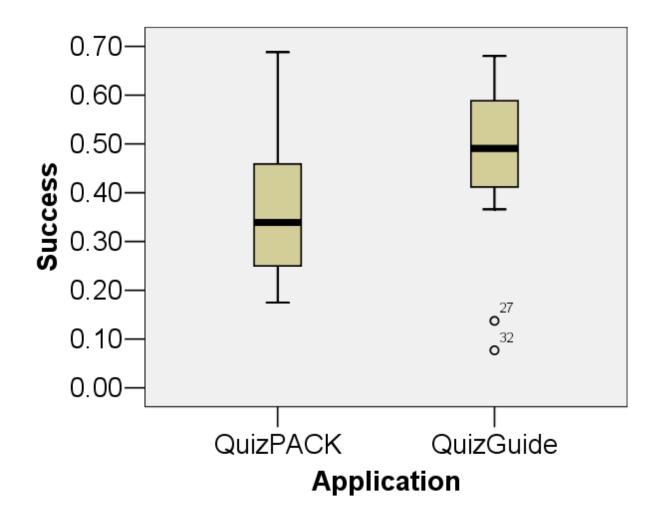

Topic–quiz organization:

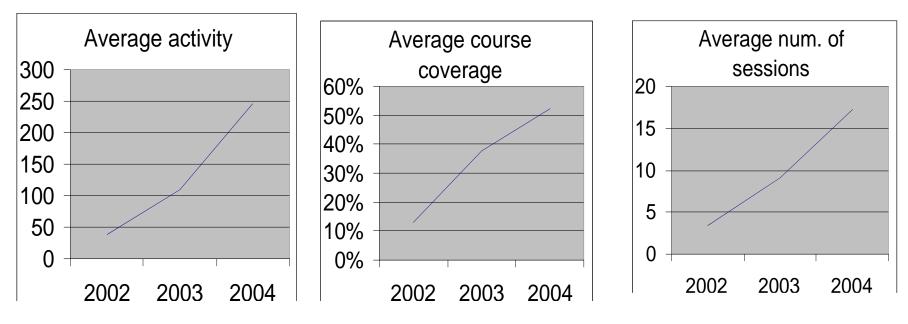

# **QuizGuide: Success Rate**

# **QuizGuide:** Motivation

- Within the same class QuizGuide session were much longer than QuizPACK sessions: 24 vs. 14 question attempts at average.
- Average Knowledge Gain for the class rose from 5.1 to 6.5

# **Topic-Based ANS: Success Recipes**

- Topic-Based interface organization is familiar, matches the course organization, and provides a compromise between too-much and too-little
- Two-way adaptive navigation support guides to the right topic
- Open student model provides clear overview of the progress

# **Social Guidance**

- Concept-based and topic-based navigation support work well to increase success and motivation
- Knowledge-based approaches require some knowledge engineering concept/topic models, prerequisites, time schedule
- In our past work we learned that social navigation "wisdom" extracted from the work of a community of learners – might replace knowledge-based guidance
- Social wisdom vs. knowledge engineering

# Knowledge Sea II

# **Open Social Student Modeling**

- Key ideas
  - Assume simple topic-based design
  - Show topic- and content- level knowledge progress of a student in contrast to the same progress of the class
- Main challenge
  - How to design the interface to show student and class progress over topics?
  - We went through several attempts...

#### Progressor

15

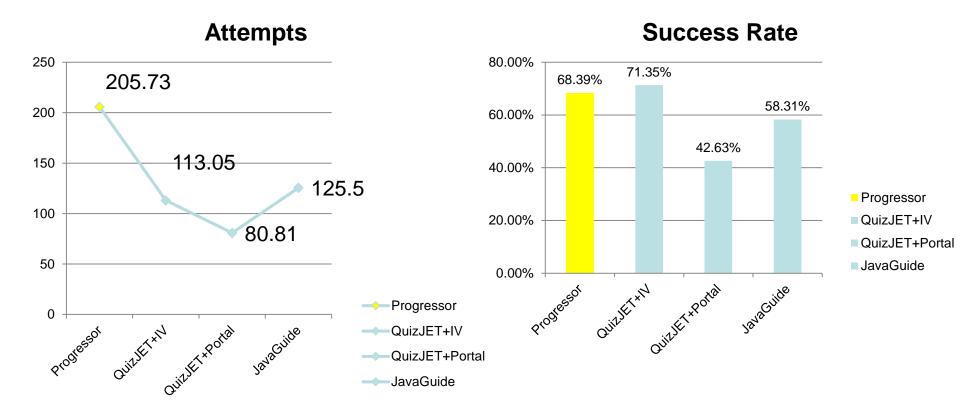

# **OSLM: Success Recipes**

- Topic organization should follow the natural progress or topics in the course
- Clear comparison between "me" and "group"
- Ability to compare with individual peers, not only the group
- Privacy management

# The Value of OSLM

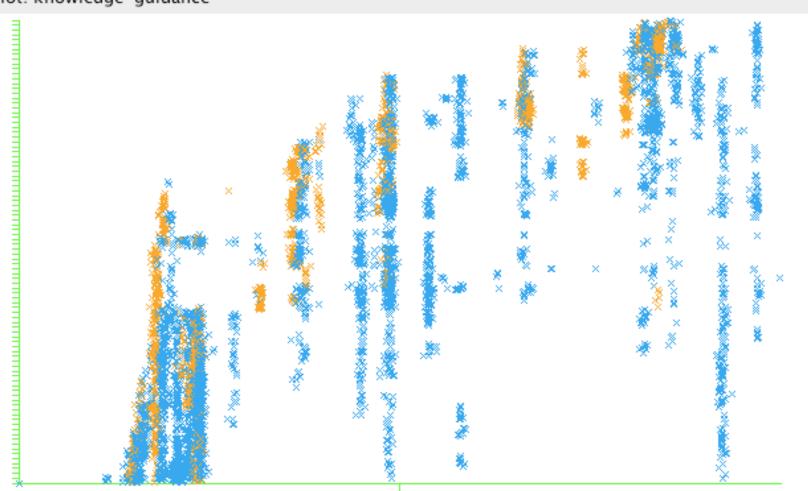

#### **The Secret**

#### Plot: knowledge-guidance

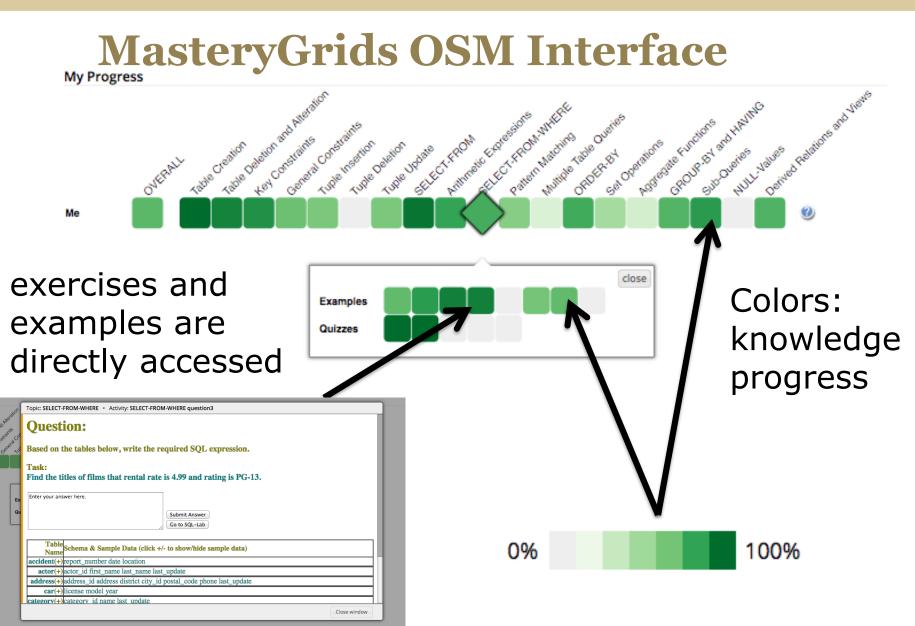

# **MasteryGrids**

- Adaptive Navigation Support
- Topic-based Adaptation
- Open Social Student Modeling
- Social Educational Progress Visualization
- Multiple Content Types
- Open Source
- Concept-Based Recommendation
- Multiple Groups

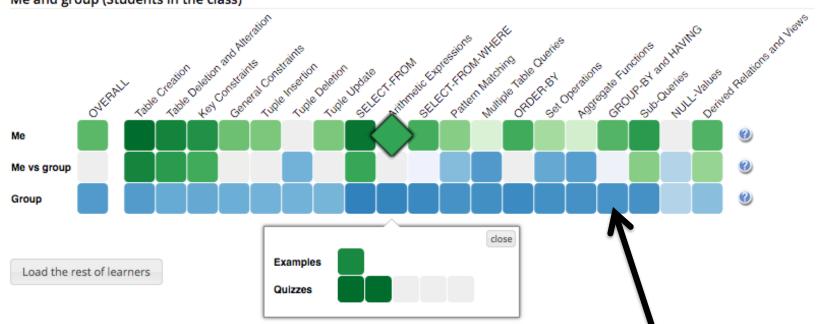

### **MasteryGrids OSSM Interface**

Me and group (Students in the class)

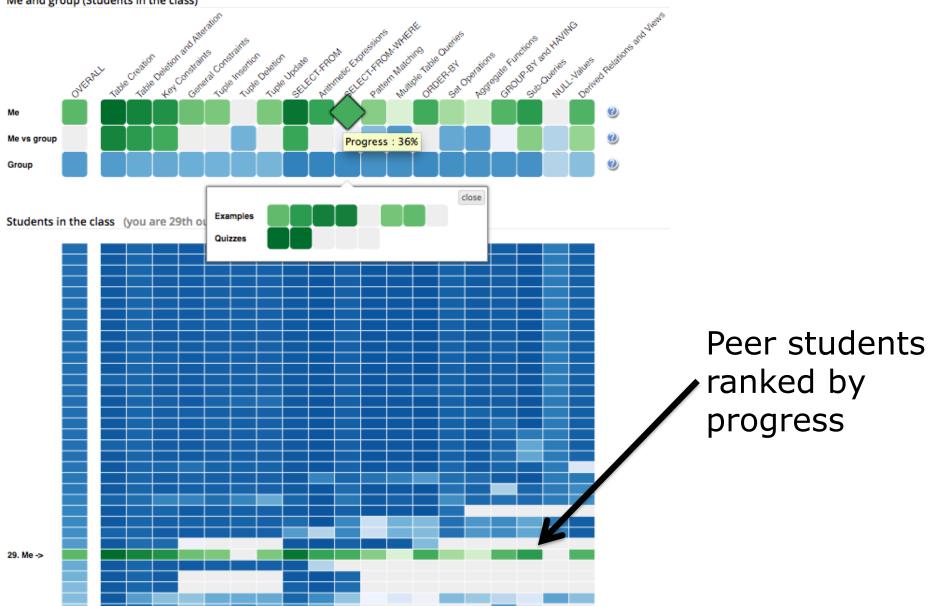

progress of knowledge of the group is represented in blue

#### Me and group (Students in the class)

# The Study

- A classroom study in a graduate Database Course
- Two sections of the same class. Same teacher, same lectures, etc.
- The students were able to access non-mandatory database practice content (exercises, examples) through Mastery Grids
- 47 students worked with OSM interface and 42 students worked with OSSM interface

# **Participants**

	OS	SM	OSM		
Systems/gender	f	%	f	%	
Female	26	55.3	21	50	
Male	21	44.7	21	50	
Total	47	100	42	100	

# **Data Collection**

- Pre- and post-test
- Student activities with the system
  - every attempt to solve problems,
  - every example line viewed
  - ...
- The Iowa-Netherlands Comparison Orientation Measure
  - how often students compare themselves with other people
  - Likert-type questionnaire, 11 items
- End of semester questionnaire

# **Impact on Learning**

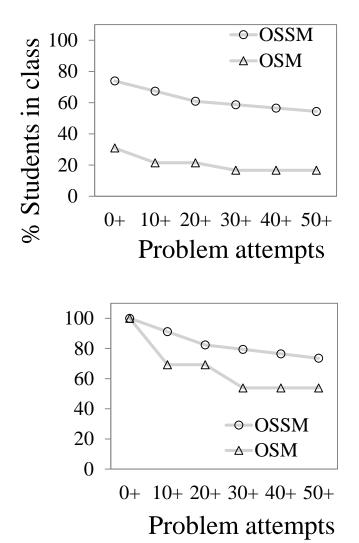

- Student knowledge significantly increased in both groups
- Number of attempted problems significantly predicts the final grade (SE=0.04,p=.017).
- We obtained the coefficient of 0.09 for *number of attempts on problems*, meaning attempting 100 problems increases the final grade by 9
- The mean learning gain was higher for both weak and strong students in OSSM group
- The difference was significant for weak students (n = 0.033)

#### **Does OSSM increase student engagement**

- OSSM group had much higher student usage
- Looking much more interesting to students at the start (compare #students after the first login)
- At the level of 30+, serious engagement with the system, the OSSM group still retained more than 50% of its original users while OSM engagement was below 20%.

# **Does OSSM increases system usage?**

Variable	OSM	OSSM	U
Vuriabie	Mean	Mean	Ũ
Sessions	3.93	6.26	685.500*
Topics coverage	19.0%	56.4%	567.500**
Total attempts to problems	25.86	97.62	548.500**
Correct attempts to problems	14.62	60.28	548.000**
Distinct problems attempted	7.71	23.51	549.000**
Distinct problems attempted correctly	7.52	23.11	545.000**
Distinct examples viewed	18.19	38.55	611.500**
Views to example lines	91.60	209.40	609.000**
MG loads	5.05	9.83	618.500**
MG clicks on topic cells	24.17	61.36	638.500**
MG click on content cells	46.17	119.19	577.500**
MG difficulty feedback answers	6.83	14.68	599.500**
Total time in the system	5145.34	9276.58	667.000**
Time in problems	911.86	2727.38	582.000**
Time in MG (navigation)	2260.10	4085.31	625.000**

# **Does OSSM increase Efficiency?**

- Time per line, time per example and time per activity scores of students in OSSM group are significantly lower than in the other group.
- Students who used OSSM interface worked more efficiently.

Variable	OSM	OSSM	U
	Mean	Mean	U
Time per line	22.93	11.61	570.000**
Time per example	97.74	58.54	508.000*
Time per problem	37.96	29.72	242.000
Time per activity	47.92	34.33	$\boldsymbol{277.000}^{*}$

# Usability and Usefulness Questionnaire Analysis

- 53 students (81 28 usage < 300 seconds)
  - 32 in OSM+Social (18 f, 14 m)
  - 21 in OSM (10 f, 11 m)
- Questions in 5-Likert scale (1 low -> 5 high)
- 3 parts:
  - **Part 1** (all students) about common OSM features
  - Part 2 (only OSM group) about the prospetive of using OSSM features
  - Part 3 (only OSM+Social group): about social comaprison features

### **Findings: Part 1**

		05	SM	OSM+	Social
Par	rt 1	Μ	SE	M	SE
1	In general, it was useful to see my progress in Mastery Grids (MG)	3.76	.228	4.03	.145
2	In general, I liked the interface of MG	3.86	.221	3.84	.163
R	Seeing my progress in the tool motivated me to work on quizzes and examples	3.52	.214	4.09	.130
4	The interface helped me to understand how the class content is organized	3.62	.223	3.81	.176
5	The interface helped me to identify my weak points	3.52	.190	3.84	.186
6	The interface helped me to plan my class work	3.33	.211	3.22	.160
7	It was clear how to access questions and examples	3.81	.264	3.56	.190
8	It was useful to see my knowledge progress for each topic [in MG]	3.71	.171	4.03	.135
9	It was useful to see how I am doing with individual quizzes and examples	3.71	.197	4.16	.128
10	Using green colors in different intensity to show my progress was easy to understand	3.90	.217	4.09	.151

#### (3) OSSM group value OSM features more than than OSSM

(Mann-Whitney U=225, p=.026 two-tailed)

(all) Tendency OSM+Social > OSM (all responses higher, but not significant diff)

# **Findings**

		05	SM	OSM+	Social
Pa	rt 1	Μ	SE	М	SE
1	In general, it was useful to see my progress in Mastery Grids (MG)	3.76	.228	4.03	.145
2	In general, I liked the interface of MG	3.86	.221	3.84	.163
3	Seeing my progress in the tool motivated me to work on quizzes and examples		.214	4.09 31	.130
	(Wilcoxon Si				
Ρ	art 3, question 10				<b>V</b>
10	Viewing my classmates' progress motivated me to work more in quizzes a	nd exa	mples	3.88	.193

# Findings

- OSSM group is more excited about OSM part
- OSSM group value OSM features more than OSM group (Mann-Whitney U=225, p=.026 two-tailed)
- OSSM group is more positive about social features that OSM
  - the actual experience is better than they think it would be.

# What we are doing now?

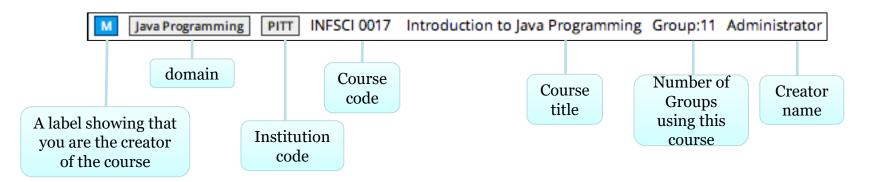

- Gender analysis
- Easy authoring to define "your course"
- Exploring more advanced guidance and modeling approaches based on large volume of social data
- Interface and cultural studies in a wide variety of classes from US to Nigeria
  - Interested to be a pilot site? Write to peterb@pitt.edu
